

### The Rules

# **Energy and Water for Hotels**

Version 4.0 — October 2022

#### The Rules | Energy and Water for Hotels | Version 4.0

Cover photo: With 239 studios and apartments, Capri by Fraser Brisbane is a NABERS rated hotel located in the middle of Brisbane CBD, Queensland. Originally an office building, the building was purchased by Frasers Hospitality in 2014 and then later converted to a hotel. The hotel was first rated for NABERS energy in 2020, achieving 4 stars and more recently has achieved a NABERS energy rating of 5.5 stars.

### 1 Introduction

#### 1.1 General

The National Australian Built Environment Rating System (NABERS) is a performance-based rating system managed by the **National Administrator**.

NABERS ratings are expressed as a number of stars, as follows:

NABERS rating	Performance comparison
6 stars *****	Market leading building performance
5 stars ****	Excellent building performance
3 stars ★★★	Market average building performance

An accredited NABERS energy or water rating is awarded when the **National Administrator** certifies a rating completed by an **Assessor**. The **National Administrator** may independently audit the rating and assist in resolving complex technical issues.

This document contains **Rules** for **Assessors** conducting an energy and/or water rating for a hotel as follows:

- a) Number of guest rooms, see Chapter 4.
- b) Number of laundry serviced rooms, see Chapter 5.
- c) Hotel quality rating, see Chapter 6.
- d) Area of heated pool, see Chapter 7.
- e) Function room seats, see Chapter 8.
- f) Minimum energy and water coverage, see Chapter 9.
- g) Documentation requirements for accredited ratings, see Chapter 10.

These Rules provides guidance for Assessors where such systems are present.

These Rules will supersede NABERS — Energy and Water for Hotels Rules, v3.2, 2015.

#### 1.2 Interpretation of the Rules and Rulings

These **Rules** are to be read in conjunction with the respective NABERS **Rulings** as they apply to the specific building type. **Rulings** are used to address specific issues that may arise after the publication of the **Rules**.

**Note:** Rules texts are amended as required by additional Rulings which are published on the NABERS website at <a href="https://www.nabers.gov.au">www.nabers.gov.au</a>.

Where a conflict between these **Rules** and existing **Rulings** is present, the requirements of the **Rulings** take precedence over the **Rules**.

#### 1.3 Situations not covered by the Rules

Assessors must comply with these Rules unless prior approval has been sought and approved by the **National Administrator**.

Where appropriate, Assessors may contact the National Administrator to propose an alternative methodology, outlining the circumstances and rationale. Prior approval for use is required and may be granted conditionally, on a case-by-case basis and at the National Administrator's discretion.

Procedures not contained within these Rules may only be used for a particular rating with prior written approval from the National Administrator. Approval to use the same procedure must be sought from the National Administrator each time it is proposed to be used. Approval is entirely at the discretion of the National Administrator.

#### 1.4 How to use this document

The term "Rules" refers to a body of works produced by NABERS that specify what must be examined, tested and documented when an Assessor conducts a rating. Wherever the term is used in this document from Chapter 3 onwards, it refers to this document, NABERS The Rules — Energy and Water for Hotels. Other Rules documents mentioned in the text are distinguished from the present document by the inclusion of their title.

Text appearing dark green and bold is a defined term. Defined terms can be found in Chapter 2 of these Rules or in the terms and definitions chapter of the respective Rules document.

The following formatting conventions may appear in this text:

 $\triangle$  Important requirements and/or instructions are highlighted by an information callout box.

Note: Text appearing with a grey background is explanatory text only and is not to be read as part of the Rules.

Example: Text appearing with a green background is intended to demonstrate a worked example of the respective Rules section or Ruling section.

This is a documentation requirement callout box.

#### 1.5 What is new in this version

A detailed list of the main changes made between this version and the previous version, is given in Appendix C.

#### 1.6 Related documents

The following documents have been referenced within these Rules:

NABERS Ruling — On-site Renewable Electricity Generation Systems, v1.1, 2021

NABERS Ruling — Shared Services and Facilities, v1.0, 2022

NABERS The Rules — Metering and Consumption, v1.3, 2021

NABERS The Rules — Thermal Energy Systems, v1.0, 2021

## 2 Terms and definitions

This chapter lists the key terms and their definitions that are integral to the proper use of this document.

Term	Definition
acceptable data	Data which meets the applicable accuracy and validity requirements of these Rules.
acceptable estimate(s)	The values derived from an estimation method permitted by these Rules in place of incomplete or uncertain data.
	Estimates that do not satisfy the above specifications are deemed unacceptable and cannot be used in the rating.
accredited hotel quality	A hotel quality rating as determined by the Australian Tourism Industry Council (ATIC).
	<b>Note:</b> The hotel quality rating is determined by ATIC using 200+ criteria which have been ranked by Australian travellers according to how important these issues are to them. An accredited property has been independently reviewed to ensure these criteria and standards have been met according to the following three areas of assessment:
	a) Quality and condition.
	b) Cleanliness.
	c) Facilities and services.
	Further information can be found at the <u>Star Ratings Australia</u> <u>website</u> .
Assessor(s)	An accredited person authorised by the National Administrator to conduct NABERS ratings.
Auditor	A person contracted to the National Administrator to perfume audits of NABERS rating applications.
Australian Tourism Industry Council (ATIC)	The national representative body for tourism that hosts the Australian tourism awards and is responsible for the program of Star Ratings Australia.
end use(s)	A purpose or activity (or a group or related purposes and activities) that water or energy is used for.
external guest room(s)	A hotel room or suite that is not located in the rated premises that otherwise meets the definition of a guest room.
function room(s)	A conference room, meeting room, function room, ballroom or similar, the primary purpose of which is to be hired out to the public for meetings and functions.

Term	Definition
guest room(s)	An individual hotel room or suite (with multiple rooms) available for individual sale by a single group of guests. This room may contain any number of beds, but these cannot be purchased separately by multiple unassociated guests, as this would be the case for a dormitory.
	<b>Note:</b> NABERS Energy and Water for Hotel Ratings do not consider the number of guests occupying the room, the number of guests that could occupy the room, or the occupancy level of the room over time.
heated pool(s)	A pool or spa that has its water temperature controlled with active heating or cooling for 6 months or more during the rating period. To qualify, pools and spas must be accessible from a common area of the hotel without passing through a guest room.
heating, ventilation and air-conditioning (HVAC)	Any system that is used for heating, ventilating or conditioning the air in an enclosed space.
hotel quality	A measure of the quality of the hotel and level of servicing provided to guests.
hotel restaurant	A restaurant that is used for the regular service of meals to hotel guests and/or casual diners. This does not include banquet halls, which are set aside for the service of meals in association with functions.
	<b>Note:</b> Further information can be found at the <u>Star Ratings</u> <u>Australia website</u> .
Key Performance Indicator(s) (KPIs)	A measurable value that demonstrates how effectively the metric determines the star quality rating in the absence of an ATIC certified rating.
laundry serviced room(s)	A guest room or external guest room for which the rated hotel's on-site laundry provides laundry services.
metering system	A system of one or more devices providing an individual measurement.
	<b>Note:</b> For further information, refer to <i>NABERS The Rules</i> — <i>Metering and Consumption</i> .
NABERS rating input form	The rating input form provided by NABERS for use by Assessors in the calculation of accredited ratings.
	<b>Note:</b> For NABERS rating for hotels, this is in the <u>NABERS</u> <u>Perform application</u> .
National Administrator	The body responsible for administering NABERS, in particular the following areas:

Page 5 nabers.gov.au

Term	Definition	
	<ul> <li>a) Establishing and maintaining the standards and procedures to be followed in all aspects of the operation of the system.</li> </ul>	
	<ul> <li>b) Determining issues that arise during the operation of the system and the making of ratings.</li> </ul>	
	<ul> <li>Accrediting Assessors and awarding accredited ratings in accordance with NABERS standards and procedures.</li> </ul>	
	The functions of the National Administrator are undertaken by the NSW Government.	
on-site laundry(ies)	A facility for the processing of laundry items located within the premises of the hotel. As a minimum, the laundry must be—	
	<ul> <li>a) operated by the hotel or a contactor to the hotel (i.e. not a guest laundry);</li> </ul>	
	<li>b) operated for the washing and drying of the guest room towels and/or bed linen. It will typically also provide ironing services; and</li>	
	c) included in the minimum energy and/or water coverage.	
out of service	A guest room that is not habitable. This will generally be because of refurbishment.	
	<b>Note:</b> A room that is habitable but vacant does not count as being out of service.	
rated premises	The building or building section to be rated.	
rating period	The 12-month base period for the rating, requiring at least 12 continuous months of acceptable data upon which the rating is based.	
Rules	Authoritative document produced by the National Administrator that specifies what must be covered by an Assessor in order to produce a rating.	
Ruling(s)	An authoritative decision by the National Administrator which acts as an addition or amendment to the Rules.	
utility	An organisation or company that holds a licence to retail electricity, gas or water, and that sells energy or water as its primary business. This definition excludes the following:	
	<ul> <li>a) Landlords which on-sell electricity or water where they neither hold a licence nor have an exemption deemed valid by the National Administrator for needing a licence.</li> </ul>	
	b) Third party contractors, such as meter reading providers.	

Page 6 nabers.gov.au

### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 2 | Terms and definitions

Term	Definition
validity period	The post-certification period during which the rating is valid for up to 12 months.

Page 7 nabers.gov.au

# 3 Key concepts and procedures

#### 3.1 General

As part of a NABERS rating system, **Rules** provide requirements within the specific rating tools. These **Rules** apply to any building type eligible for a NABERS rating using the NABERS energy rating tools.

#### 3.2 Eligibility criteria

#### 3.2.1 General

A building is considered eligible for a NABERS rating if all of the following eligibility criteria are met:

- a) Building type: During the **rating period**, the building to be rated occupies a building or part of a building that is a hotel, see Section 3.2.2.
- b) Energy or water coverage of the premises: Minimum energy or water coverage for the rating scope and spaces included is met, as described in Chapter 9.
- c) New buildings and major refurbishments: New buildings or buildings undertaking major refurbishments are eligible for a NABERS rating as soon as 12 months of a rating period can be completed. In these cases, the rating period can start as soon as the building is open to and accessible by the public.

A NABERS rating is based on a 12-month **rating period**. Once certified, the rating is valid for 12 months from the certification date (the **validity period**), for further information, see Appendix A.

#### 3.2.2 Hotel type

#### 3.2.2.1 Typical hotels

The benchmarks for energy ratings and water ratings were built for hotels with a "typical" level of servicing and facilities, including budget through to luxury accommodation of various hotel industry definitions. Table 3.2.2.1 outlines the types of accommodation considered "typical".

Table 3.2.2.1: Typical hotel types included in benchmarks

Hotel type	Definition
Standard	An establishment whose main function is to provide accommodation for travellers. Each <b>guest room</b> has their own shower and toilet facilities. Bedding, towels, soap are included in rooms rates. Housekeeping is available daily for guests.

Suite	A hotel where "suites" typically include self-contained bathroom, kitchen facilities and multiple rooms under the same room number. Rooms do not have laundry facilities within individual suites.
Boutique	A small stylish hotel, with no more than 100 rooms and highly personal service. Typically situated in a fashionable urban location.
Conference or convention	Hotels geared toward hosting meetings, incentives, conferences and exhibitions (MICE). Typically large numbers of <b>function room</b> seats and multiple spaces available for booking.
Gaming/casino	A hotel that also provides gambling (casino) facilities.
Ski and spa	A hotel located near a ski or spa (hot spring) area that may provide additional services for users, e.g. lockers, other seating areas.

#### 3.2.2.2 Atypical hotels

Atypical hotels of the following types can be rated, but the services and facilities can be too different for their energy and water efficiency to be meaningfully compared to other hotels. The NABERS rating input form provides guidance on conditions of certification (such as advertising the result publicly) that may be placed on the atypical hotel. An Assessor should seek further advice from the National Administrator if there are any further queries about the suitability of the scheme to any particular hotel. Table 3.2.2.2 outlines the types of accommodation considered atypical.

**Note:** The **National Administrator** may look to develop a more suitable rating methodology in future when demand for NABERS ratings of these types of hotels is established.

Table 3.2.2.2: Atypical hotel types not currently included in benchmarks

Hotel type	Definition
Student accommodation	A building that provides residential accommodation to students during academic term periods. Provides communal lounge/dining areas, kitchens and bathrooms. Serviced and maintained daily or weekly.
Resort	A self-contained development that can be a destination in its own right, as well as providing accommodation for nearby special attractions, such as beaches and seashores, scenic or historic areas, ski parks, or spas. Usually all traveller needs, such as dining, entertainment, shopping and local transportation, are provided by the resort establishment.
Serviced apartment	An establishment meeting the criteria of a hotel but also providing a fridge and kitchen sink, dining table and chairs with crockery and cutlery for each guest. The kitchen must include a microwave, hot plate of electric frypan with utensils. Dustpan/brush and broom or vacuum are also provided.

### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 3 | Key concepts and procedures

Backpackers hostel	Low-cost accommodation with dormitory style rooms where individual bunks can be booked.
Motel	A property offering significant levels of on-site car parking for guests. A minimum of one space for 75 % of total rooms, or 25 % of rooms if within 5 km of a capital city CBD.
Pub	An establishment whose main function is to serve alcohol, mostly beer.

#### 3.3 Rating period

A NABERS rating is based on a 12-month **rating period**. Once certified, the rating is valid for a further 12 months after the **rating period** — this is called the **validity period**.

It takes time for the **Assessor** to complete a rating. Therefore, 120 days is given to lodge the rating after the end of the **rating period**. Ratings lodged after the 120 days will have a reduced **validity period** to ensure all ratings are based on current data.

The **Assessor** must respond to all questions from the **National Administrator** within 10 working days to avoid impacting the validity of the rating.

**Assessors** may submit a NABERS energy rating and NABERS water rating for the same premises as a combined rating application. When submitting a combined rating application, both ratings must have the same **rating period**.

More information on the **rating period**, **validity period** and time limits for submission can be found in Appendix A.

#### 3.4 Standards for acceptable data and estimates

#### 3.4.1 General

An assessment for an accredited NABERS for energy or water for hotel rating must be based on the **acceptable data** or **acceptable estimates** specified in the **Rules** (including applicable **Rulings**) or as directed by the **National Administrator**.

Data and estimates must be of an acceptable standard. The decision process for determining acceptable data and acceptable estimates in Sections 3.4.2 and 3.4.3 below must be followed, except where another process is specifically allowed by a provision of these Rules.

**Note:** Specific procedures related to standards for **acceptable data** and **acceptable estimates** in individual sections of these **Rules** take precedence over the standards in Section 3.4.2 and 3.4.3 below. Where specific procedures are followed, the requirement for compliance with Sections 3.4.2 and 3.4.3 is deemed to be satisfied.

#### 3.4.2 Acceptable data

If accurate and verifiable **acceptable data** is available, it must be used. Where a section of the **Rules** allows more than one type of data source to be used and no particular priority is given, the following order of preference applies:

a) Data obtained directly by the Assessor.

### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 3 | Key concepts and procedures

- b) Data provided by a third party without a significant interest in the operation or performance of the building or its equipment (such as an energy or water **utility**), including one of the following:
  - 1) Documents or other records provided by a third party which can be verified by the source, e.g. **utility** bills.
  - Documents or other records which cannot be independently verified but whose authenticity and accuracy is attested to by a credible and responsible person without a conflict of interest.
  - 3) Written information provided by a credible and responsible person, which includes their full name, position and contact details of the person giving the information.
  - 4) Verbal information provided by a credible and responsible person, recorded in writing by the **Assessor** with the full name, position and contact details of the person giving the information.
- c) Data provided by the owner commissioning the rating, or a third party with a significant interest in the operation or performance of the building or its equipment (such as a facility manager, technical contractor or equipment supplier), including one of the following:
  - Documents or other records provided by a party to an agreement or transaction which can be verified by another party to the same agreement or transaction, e.g. contracts or other legal agreements.
  - 2) Documents or other records which cannot be independently verified but whose authenticity and accuracy is attested to by a credible and responsible person without a conflict of interest.
  - 3) Verbal information provided by a credible and responsible person, recorded in writing by the Assessor with the full name, position, and contact details of the person giving the information.

#### 3.4.3 Acceptable estimates

If acceptable data is not available, estimates (including assumptions, approximations and unvalidated data) can be used if they are deemed to be acceptable estimates in accordance with these Rules.

Acceptable estimates must total to no more than  $\pm$  5 % of the overall rating greenhouse gas emissions or water consumption, as calculated when using the **NABERS rating input form**. Where they are greater than 5 %, the building cannot be rated until sufficient acceptable data and/or acceptable estimates have been obtained.

#### 3.5 Site visits

#### 3.5.1 General

For every rating application, **Assessors** must conduct a site visit to inspect the **rated premises**. The purpose of the site visit is as follows:

a) Become familiar with the layout, services and features of the **rated premises**.

#### The Rules | Energy and Water for Hotels | Version 4.0

Chapter 3 | Key concepts and procedures

- b) Confirm that documentation provided for the assessment is accurate, complete and up-to-date.
- c) Check that all required spaces have been included in the **guest room** count.
- d) Check the laundry facilities and internal and external **laundry serviced rooms** are correctly accounted for.
- e) Check for all **KPIs** as part of determining the self-assessed **hotel quality**.
- f) Check the configurations of **function rooms** matches the records provided.
- g) Check for the operation of any heated pools.
- h) Check for inclusions in and exclusions from energy and water coverage (as appropriate).
- i) Check floor configuration.
- j) Visit plant rooms to ensure that all relevant equipment is covered under the meters included in the rating.
- k) Resolve any other issues that arise.

An **Assessor's** inspection of the **rated premises** is expected to include a physical check of the servicing.

There may be circumstances where access to all or part of the premises is refused due to safety or security concerns. If this occurs, the **Assessor** must explain why they could not access these spaces, and fully document this in the **NABERS rating input form**. Any known impacts on the quality of the information obtained for the assessment must also be fully described, e.g. an **acceptable estimate** has been used in the absence of verified data.

#### 3.5.2 Delegating site visit to another Assessor

Where an **Assessor** cannot undertake a site visit to inspect the **rated premises**, **Assessors** may delegate this task to another **Assessor** accredited specifically for hotels.

The **Assessor** lodging the rating is responsible for the accuracy of the data. The **Assessor** must obtain and retain all the evidence required to prove their assumptions for auditing purposes, in accordance with the documentation requirements listed in Chapter 10.

#### 3.5.3 Situations where site visit cannot be conducted or delegated

Where there are significant difficulties visiting the site, the **Assessor** cannot conduct a site visit or cannot delegate this task to another **Assessor**, guidance must be sought from the **National Administrator** prior to submission of the rating application.

#### 3.6 Documentation and record-keeping

#### 3.6.1 Required documentation

An assessment may be based on copies of original documents such as **utility** bills, signed leases and other records, as long as the **Assessor** is satisfied that they are, or can be verified to be, true and complete records of the original documents or files. Access to original documents is preferred if they are available. Partial copies of original documents must be sufficient to identify the original document including date, title and file name.

#### 3.6.2 Record-keeping for auditing purposes

**Assessors** must keep all records on which an assessment is based.

The records kept by **Assessors** must be to such a standard that it would be possible for another **Assessor** or an **Auditor** to accurately repeat the rating using only the documents provided. This includes records of assumptions and all information and calculations used as the basis for **acceptable estimates**. The records kept must be the actual documents used for the assessment or verifiable copies. Summaries or other derivative documents that quote the original source documents are not acceptable, even if prepared by the **Assessor** from original documents.

Digital copies of documents are considered acceptable in all cases.

Records must be kept for 7 years from the date the rating application was lodged and be made available for audit on request.

**Note:** Assessors remain responsible for ratings they have conducted, even if they move companies.

A list of the usual documentation for a rating is presented in Chapter 10, however, additional documentation may also be required to permit an **Auditor** to accurately repeat the rating using only the documents provided.

#### 3.7 Alternative methodologies

**Assessors** may be required to use alternative methodology for obtaining or interpreting data for an assessment where standard methods outlined in the NABERS **Rules** cannot be applied. At a minimum, the alternative methodology must be one of the following:

- a) Equivalent to the preferred method in terms of its results, accuracy and validity.
- b) Acceptable in place of the preferred method, subject to the data resulting from the alternative method being treated as an estimate in accordance with Section 3.4, or other specified conditions on the use of the data.
- c) All alternative methodologies must be approved by the **National Administrator** prior to use. For further information contact the **National Administrator**.

# 4 Number of guest rooms

#### 4.1 General

In NABERS energy and water for hotel ratings, the size of the hotel is measured through the number of **guest rooms**. This figure is used (along with other factors such as the **hotel quality**, **laundry serviced rooms**, **function room** seats and area of **heated pool**) to adjust the figures for energy and water consumption so that a fair comparison can be made between hotels of different size or service level.

The number of guest rooms is determined through a process which—

- a) counts the number of guest rooms in the hotel; and
- b) adjusts the number of **guest rooms** based on the level of availability of the rooms during the **rating period**.

#### 4.2 Process overview

The process to determine the number of internal and external **guest rooms** must be in accordance with Table 4.2.

Step	Task	Reference
1	Determine the total number of <b>guest rooms</b> in the hotel.	Section 4.3
2	Determine the number and duration of <b>guest</b> rooms that can be counted as <b>out of</b> service.	Section 4.3.2
3	Enter data into the NABERS rating input form.	N/A

Table 4.2: Determining number of internal and external guest rooms

#### 4.3 Determining number of guest rooms

#### 4.3.1 Principle and definitions

In the first step, the **Assessor** must determine the total number of **guest rooms** in the hotel on a floor-by-floor basis.

When counting **guest rooms**, the **Assessor** must take into account the definition of **guest room**, which counts each room that can be offered for individual sale as a room irrespective of the number of beds or the number of occupants in that room.

#### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 4 | Number of guest rooms

The Assessor should seek documentation from the hotel on the number of guest rooms but must confirm the accuracy by comparing at least 20 % of the levels through a site inspection, to ensure the hotel records are accurate. Levels with the largest number of rooms must be counted first. If no records are available, the Assessor may determine the number of quest rooms by counting each room during the site inspection.

The Assessor must not include guest rooms that are operated as dormitories.

For documentation requirements, see Sections 10.2.1 and 10.2.2.

#### 4.3.2 Identifying out-of-service guest rooms

To identify out-of-service guest rooms, the Assessor must obtain documentation from the hotel identifying which rooms were or were not available for sale during the rating period.

For each **guest room**, the **Assessor** must obtain documentation to identify any periods when rooms were out-of-service for more than 7 days. This must include the start and end dates of each period of availability or non-availability.

When accounting for out-of-service rooms, the Assessor must only allow for rooms that are uninhabitable. Rooms that are vacant but otherwise habitable are not counted as being out of service.

For documentation requirements, see Section 10.2.3.

Note: If the hotel level has out-of-service guest rooms of differing days, then the Assessor should break the level into separate components to enable the data to be represented accurately when entering data into the NABERS rating input form.

NABERS energy and water for hotels adjusts for out-of-service guest rooms at a rate of 50%. Therefore, a hotel with 100 guest rooms of which 50 are out of service for the whole rating period is allocated 75 rooms in the rating. This reflects the fact that the number of guest rooms is also a measure of common area services and facilities, which do not vary as rooms fall in and out of service.

# 5 Laundry serviced rooms

#### 5.1 General

In NABERS energy and water for hotel ratings, the potential impact of **on-site laundry** services is measured through the **laundry serviced rooms**. This figure is compiled from the number of **guest rooms** that the **on-site laundry** services, both within the hotel and from other hotels serviced by that laundry. This figure is adjusted by the scale of service provided, being either full-service (i.e. towels and bed linen) or half service, i.e. towels or bed linen.

#### 5.2 Process overview

The process to determine the number of **laundry serviced rooms** must be in accordance with Table 5.2.

Table 5.2: Determining number of laundry serviced rooms

Step	Task	Reference
1	Assess whether the hotel has an on-site laundry.	Section 5.3
2	Determine the number of <b>guest rooms</b> within the hotel serviced by the <b>on-site laundry</b> .	Section 5.3.2
3	Determine the number of external guest rooms outside the hotel that are serviced by the on-site laundry.	Section 5.3.3
4	Determine the laundry service level for each laundry-serviced room.	Section 5.3.4
5	Confirm the availability of the on-site laundry.	Section 5.3.5
6	Enter data into the NABERS rating input form.	N/A

#### 5.3 Determining number of laundry serviced rooms

#### 5.3.1 Principle and definitions

The **Assessor** must validate whether laundry services provided to **guest rooms** can be included within the rating.

For the laundry service of a **guest room** to be counted for the NABERS energy or water for hotels rating it must be provided from an **on-site laundry**. Such a laundry must—

a) meet the definition of an **on-site laundry** (i.e. be within the premises and be used for laundering towels and/or bed linen); and

#### The Rules | Energy and Water for Hotels | Version 4.0

Chapter 5 | Laundry serviced rooms

b) be covered by the energy consumption captured within the rating.

Laundry service of a guest room is not permitted to be counted in the NABERS energy or water for hotels rating if the-

- 1) laundry does not meet the definition of an **on-site laundry** (e.g. it is an off-site laundry or self-serviced guest laundry); or
- 2) energy or water consumption of the laundry (as applicable) is not included within the energy or water consumption for the rating.

For documentation requirements, see Section 10.3.1.

Note: Many hotels have one or more laundries that do not count as on-site laundries for the purpose of a NABERS energy or water for hotels rating. Common examples of such laundries are common guest laundries, laundries in serviced apartments and dry cleaning or valet service laundries. While these laundries are counted within the energy coverage of the rating, they have no bearing on the assessment of a laundry-serviced room.

#### 5.3.2 Identifying internal guest rooms serviced by on-site laundry

For a guest room inside the hotel to be considered as a laundry-serviced room it must either have its-

- a) towels or bed linen laundered by the on-site laundry; or
- b) towels and bed linen laundered by the on-site laundry.

The Assessor must validate that either of these is true by obtaining written confirmation from the site as to the coverage of laundry services from the on-site laundry.

In addition, the Assessor must confirm that the on-site laundry provided laundry services to the guest rooms for the entirety of the rating period.

For documentation requirements, see Section 10.3.2.

#### 5.3.3 Identifying external guest rooms serviced by on-site laundry

For an external guest room to be considered as a laundry serviced room, it must either have its-

- a) towels or bed linen laundered by the on-site laundry; or
- b) towels and bed linen laundered by the on-site laundry.

The Assessor must validate that either of these is true by obtaining written confirmation from the external hotel as to the coverage of laundry services from the on-site laundry.

The Assessor does not need to confirm the room availability for the external hotel rooms, as this information is not expected to be readily available.

#### 5.3.4 Identifying laundry service level for laundry serviced rooms

A laundry serviced room is considered to have either half or full service, as follows:

#### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 5 | Laundry serviced rooms

- a) Half service: Either its towels only or its bed linen only are laundered by the on-site laundry, but not both.
- b) Full service: Both its towels and its bed linen are laundered by the on-site laundry.

The Assessor must validate the laundry serviced room for all laundry-serviced rooms by obtaining written confirmation from the site for guest rooms or from an external hotel for external guest rooms.

Note: Laundry energy and water consumption are usually determined by the mass of the laundered items. However, the mass of laundry created by a given laundry service level is not considered in the determination of laundry service level. Therefore, a hotel that adopts efficient practices to minimise the washing of unused towels and bed linen will perform better in its NABERS energy or water for hotels rating when compared to a hotel that has no such practices and operates less efficiently.

Most laundries that qualify as on-site laundries will also carry out other laundry activities related to the operation of the hotel, such as laundry of uniforms and table cloths. These activities are not relevant to the determination of the laundry service level.

#### 5.3.5 Confirm availability of laundry

To confirm the availability of the on-site laundry, the Assessor must obtain documentation to identify the days the laundry service was available.

For documentation requirements, see Section 10.3.4.

# 6 Hotel quality rating

#### 6.1 General

In NABERS energy and water for hotel ratings, the overall range and quality of services is measured through the **hotel quality** star rating. This is based on Australia's official accommodation accreditation program, the Star Rating Scheme, managed by Star Ratings Australia. The rating certified by the **Australian Tourism Industry Council (ATIC)** provides an index of the overall level of service, with hotels generally rating between 2 stars (budget brands) and 5 stars (luxury brands). A wide range of energy consuming services, features and facilities within hotels correlate with this rating and is essential in determining the energy and water consumption of the hotel.

#### 6.2 Process overview

The process to determine the **hotel quality** star rating must be in accordance with Table 6.2.

Step	Task	Reference
1	Assess whether the hotel has a current accredited hotel quality star rating licence certified by the ATIC, or if the hotel is listed on the Star Ratings Australia website. If it does, move to Step 3; otherwise move to Step 2.	Section 6.3
2	If the quality has <i>not</i> been certified by ATIC, the Key Performance Indicators (KPIs) checklist must be used to determine the self-assessed hotel quality star rating of the hotel.	Section 6.4
3	Enter data into NABERS rating input tool.	N/A

Table 6.2: Determining hotel quality star rating

#### 6.3 Validating an accredited hotel quality report

The **Assessor** must request a copy of the **ATIC** assessment report to validate the **accredited hotel quality** star rating. If the assessment report cannot be found, evidence the hotel is currently listed on the Star Ratings Australia website can be used.

For the report to be acceptable for the NABERS energy or water for hotels rating—

- a) there must have been no construction of new rooms or new hotel facilities since the date of the report (noting that this does not include refurbishment and repurposing);
   and
- b) the report must be no more than 4 years old.

If the review meets these requirements, then the accredited hotel quality star rating can be used for the NABERS energy or water rating by entering the data into the NABERS rating input form.

If the review does not meet these requirements, then the hotel quality must be self-assessed using the KPI checklist in accordance with Section 6.4.

For documentation requirements, see Section 10.4.1.

#### 6.4 Validating self-assessed hotel quality

#### 6.4.1 Key performance indicators

Where there is no ATIC assessment report or evidence of listing on the Star Ratings Australia website to validate the hotel quality star rating, the Assessor must validate a self-assessed hotel quality star rating, using the KPIs, in order to determine the appropriate hotel quality.

The Assessor must determine the service delivered level for each category from the KPI checklist found in Appendix B. The NABERS rating input form uses the results of this checklist to automatically calculate the equivalent star rating, based on the flow chart in Figure A.1.

Table 6.4.1 lists the KPIs used for a self-assessed star rating. A key part of the assessment is calculating the average room size. This can be determined using the appropriate method listed in Section 6.4.2.

For documentation requirements, see Section 10.4.

**Table 6.4.1: Determining KPIs** 

Item	KPI	Supporting evidence method
1	Reception (staffed)	Staff register
2	Meals served per day (this can be in the hotel restaurant, bar, café, etc.)	Trading hours (site inspection)
3	Room service	List of guest services, website
4	Bar and/or lounge	Site inspection, website
5	Swimming pool	Site inspection, website
6	Spa and/or sauna	Site inspection, website
7	Gym	Site inspection, website
8	Laundry service	List of guest services, website
9	Concierge	Site inspection
10	Porter	Site inspection
11	Business/conference facilities	Site inspection, website
12	Average room size	Room schedule

For documentation requirements, see Section 10.4.2.

#### 6.4.2 Calculating average guest room size

#### 6.4.2.1 General

To determine the average guest room size, there are two methods available, depending on the information supplied from the hotel.

#### 6.4.2.2 Method 1

For this method, the hotel must provide the floor area of each room type and the number of rooms in each type. The Assessor can then determine total hotel guest room area through summation, and the total number of quest rooms. The following formula is used to calculate the average **guest room** size:

$$Average \ guest \ room \ size = \frac{Total \ hotel \ guest \ room \ area}{Total \ number \ of \ rooms}$$

#### 6.4.2.3 Method 2

This method must only be used if the requirements for Method 1 (see Section 6.4.2.2) cannot be met.

The Assessor must obtain from the hotel the number of rooms in each room type. The default room area is then used to determine the approximate total hotel guest room area. The following formula is used to calculate the average guest room size:

Average guest room size = 
$$\frac{Approximate\ total\ hotel\ guest\ room\ area}{Total\ number\ of\ rooms}$$

Table 6.4.2.3 has been developed by a technical working group in conjunction with the hotel quality checklist. If all rooms are the same size, the largest room type must be used for all rooms.

Table 6.4.2.3: Room types and default room sizing

Room type	Description	Default room area (m²)
Single	Room assigned to 1 person Typically 1 bed	13
Double	Room assigned to 2 people Typically 1 to 2 beds	17.5
Triple	Room assigned to 3 people Typically 2 to 3 beds	21
Quad/ family	Room assigned to 4 people Typically 2 to 3 beds	35
Queen	Room with a queen-sized bed	18

### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 6 | Hotel quality rating

Room type	Description	Default room area (m²)
	Typically assigned to 1 to 2 people	
King	Room with a king-sized bed Typically assigned to 1 to 2 people	21
Twin	Room with 2 single beds Typically assigned to 1 to 2 people	15
Double-double	Room with 2 double beds Typically assigned to 2 to 4 people	22
Suite	Sleeps 2+ people and also has a lounge/dining area	35

For documentation requirements, see Section 10.4.3.

Page 22 nabers.gov.au

## 7 Area of heated pool

#### 7.1 General

In NABERS energy for hotel ratings, the potential impact of heated swimming pools and spas is accounted for through the area of the **heated pool**. This figure is calculated for all swimming pools (indoor or outdoor) that are heated for at least 6 months a year.

#### 7.2 Process overview

The process to determine the **heated pool** area must be in accordance with Table 7.2.

Table 7.2: Determining heated pool area

Step	Task	Reference
1	Assess whether the hotel has one or more heated pools.	Section 7.3.1
2	Measure the surface area of the pool.	Section 7.3.2
3	Determine closure periods for the <b>heated pool</b> .	Section 7.3.3
3	Enter data into the NABERS rating input form.	N/A

#### 7.3 Determining area of heated pools

#### 7.3.1 Principle and definitions

The **Assessor** must survey the hotel for the presence of **heated pools**.

To qualify, a pool or spa must meet the definition of a heated pool, i.e. be a swimming pool or spa that is heated for at least 6 months during the rating period. A heated pool must be accessed from a common area of the hotel without passing through a guest room.

The Assessor must determine the period of heating, either by enquiry to the hotel, or by viewing available records.

For documentation requirements, see Section 10.5.1.

#### 7.3.2 Measuring heated pool area

For each heated pool, the Assessor must assess the area of the heated pool. This is a measure of the exposed surface area of the **heated pool** in normal operation.

The **Assessor** may use site plans or on-site measurements for this purpose.

For documentation requirements, see Section 10.5.2.

#### 7.3.3 Determining heated pool availability periods

The Assessor shall determine the number of days the heated pool has been unavailable for use during the rating period.

In order to qualify as a heated pool closure period, the heated pool must have been unavailable at any time during a period of 14 days or more. No consideration is made of whether the heated pool was actually heated or not during the closure period.

The Assessor shall use hotel records or written communications to determine the closure periods, including the start and stop dates of any such closures.

For documentation requirements, see Section 10.5.3.

### 8 Function room seats

#### 8.1 General

In NABERS energy and water for hotel ratings, the potential impact of on-site function room facilities is measured through the function rooms seats. This figure is compiled from the maximum occupancy of the hotel's function room facilities with an adjustment for the level of usage of those facilities.

#### 8.2 Process overview

The process to determine the number of **function room** seats must be in accordance with Table 8.2.

Step Task Reference 1 Assess whether the hotel has one or more Section 8.3 function rooms. 2 Determine the maximum occupancy of each Section 8.3.2 function room. 3 Determine the usage of each function room Section 8.3.3 during the rating period. 4 N/A Enter data into the NABERS rating input form.

**Table 8.2: Determining function room seats** 

#### 8.3 Determining number of function room seats

#### 8.3.1 Principle and definitions

The **Assessor** must validate whether the hotel has **function room** seats that can be included within the rating.

To qualify, function room seats must—

- a) meet the definition of function room seats. i.e. be within meeting rooms, function rooms, board rooms, ballrooms or similar whose primary purpose is to be available for hire by the general public;
- b) be provided with full HVAC capacity, not just open-air heating; and
- c) not be located in **hotel restaurant** spaces.

No count can be made for facilities that do not qualify as function room seats.

The **Assessor** must identify each **function room** by name or number to assist with record keeping and auditing.

For documentation requirements, see Section 10.6.1.

#### 8.3.2 Determining maximum occupancy

For each function room, the Assessor must assess the maximum occupancy. This can be determined from-

- a) records of current licence certificates or authority approvals for the maximum number of seated guests; or
- b) publicly available records, such as the hotel's website or function room facility marketing materials that specify the maximum seating capacity of the space. These records must be current and available for prospective customers to make bookings for the function room facilities.

The Assessor must, in either case, seek the maximum seated occupancy configuration.

Note: It is not expected that Assessors would conduct any physical counts of seats on site. Since a function room is available for booking by the public, capacity records are expected to be published and readily accessible.

For documentation requirements, see Section 10.6.2.

#### 8.3.3 Determining usage

The Assessor shall determine the usage of the function rooms in order to adjust the number of function room seats to compensate for vacant periods.

The usage is determined from the number of weeks that a function room has at least one booking, with-

- a) a week being defined as Monday through to Sunday;
- b) the starting day of a booking is the day considered, even if events finish past midnight and go into early the next morning.

For the weeks where a function room has no booking, the room is considered not in use and the associated function room seats are excluded from the count for that week. Evidence of the occupancy of these function rooms is required to be sought, e.g. function room booking system records.

Where a space has solid movable walls that allow it to be partitioned (i.e. it can operate in many different modes with different bookable capacities), the priority is that the seats are each allocated the correct number of weeks of use (without double counting), regardless of how they may be configured into larger or smaller rooms. An individual seat can only be counted as being in use for a week for one space, see the example below.

For documentation requirements, see Section 10.6.3.

Chapter 8 | Function room seats

#### **Example: Partitioned function room**

A hotel has a meeting room that can be configured as—

- a) a single room (Ballroom A) with 300 seats; or
- b) as two rooms (Ballroom B and Ballroom C) each with 120 seats.

There are 10 weeks in the year where the room is used at least once a week in the Ballroom A configuration with a capacity of 300 seats. In addition to these 10 weeks, there are 35 weeks in which Ballroom B has bookings and 23 weeks in which Ballroom C has bookings. In 7 of the 10 weeks where the Ballroom A configuration has bookings, Ballroom B also has separate bookings.

The **Assessor** would determine this as follows:

- 1) Ballroom A: 300 seats, 10 weeks.
- 2) Ballroom B: 120 seats, 35 weeks.
- 3) Ballroom C: 120 seats, 23 weeks.

For the 7 weeks where Ballroom A and Ballroom B both have bookings, only the Ballroom A configuration is included in the count (as this already includes those seats which are used in Ballroom B) and therefore avoids double counting.

# 9 Minimum energy and water coverage

#### 9.1 General

Correctly determining the scope of energy and water supply and consumption data is essential to the accuracy of a NABERS energy and water for hotels ratings. The key principles are as follows:

- a) An assessment for an accredited rating must include all sources of external energy supplied to the rated premises and must cover all of the energy end uses specified for the rating type in Sections 9.2.2 and 9.3.2 respectively.
- b) **Utility** and non-**utility** meters that meet the requirements of *NABERS The Rules Metering and Consumption* may be used in any combination to achieve the required coverage, subject to the accuracy requirements of Section 3.4.

This chapter is to be read in conjunction with Chapter 3 of NABERS The Rules — Metering and Consumption.

Where several instances of similar individual **end uses** occur together, so as to form a single collection (e.g. luminaires in hallways, taps in rooms, or emergency lighting in a stairwell) then the collection is to be regarded as a single **end use**.

#### 9.2 Minimum energy coverage

#### 9.2.1 General

Once the energy sources and their supply points have been determined, **Assessors** must ensure that all the required energy **end uses** as listed in this chapter are covered by the sources and supply points identified in accordance with Chapter 3 of *NABERS The Rules* — *Metering and Consumption*.

If an **end use** is required to be included in the rating but is not covered by one of the supply points identified, then the **Assessor** must use one of the alternative allowable methods listed in Chapter 7 of *NABERS The Rules* — *Metering and Consumption* to ensure the minimum energy coverage requirements can be met.

#### 9.2.2 Energy coverage

Required minimum energy coverage includes all energy consumed within the premises to support the operation of the hotel during the **rating period**, including the following:

- a) Common area, guest room and back-of-house HVAC.
- b) Common area, guest room, exterior and back-of-house lighting.

#### The Rules | Energy and Water for Hotels | Version 4.0

Chapter 9 | Minimum energy and water coverage

- c) Common area, guest room, exterior and back-of-house power.
- d) Vertical transportation servicing the hotel.
- e) Car park lighting and ventilation, where provided for the exclusive use of hotel quests or hotel staff.
- On-site hotel kitchens and hotel restaurants servicing guests with charge-to-room facilities.
- g) Any on-site laundries.
- h) Any on-site heated indoor/outdoor pools for guest use.
- Small light and power for both front and back of house. i)
- Lighting, power and HVAC services to any on-site function rooms. i)
- k) Gyms for guest use or gyms with guest charge-to-room facilities, located within the hotel.
- I) Day spas with guest charge-to-room facilities, located within the hotel.

The Assessor must examine available single-line diagrams and electrical circuit schedules as well as visit the hotel plant rooms to ensure that all relevant equipment is covered under the meters included in the rating.

For documentation requirements, see Section 10.7.1.

Note 1: For further information on on-site renewable systems, refer to NABERS Ruling — On-site Renewable Electricity Generation Systems.

**Note 2:** For further information on GreenPower<sup>™</sup>, refer to Section 4.5 of *NABERS The* Rules — Metering and Consumption.

#### 9.2.3 Retail facilities

Hotels can often have a degree of retail function on site, e.g. souvenir shops, fashion shops. Any retail facility within the rated premises that has a charge-to-room facility for guests is to be counted within the energy coverage of the NABERS energy for hotels rating.

#### 9.2.4 Unserviceable rooms

The energy use of unserviceable rooms or any other out-of-use facility must always be included. This inclusion is irrespective of the fact that the associated room count or other input variable may have been excluded or discounted from the rating.

#### 9.2.5 Car parks

#### 9.2.5.1 General

Energy use associated with hotel car parks is included within the coverage of the rating, except where it can be demonstrated that the car park is not for hotel use or under the control of the hotel.

#### The Rules | Energy and Water for Hotels | Version 4.0

Chapter 9 | Minimum energy and water coverage

Where parking is provided to the hotel by a third party (e.g. a standard contract with a public car park operator) that controls the operation of the car park then the car park energy is not included in the rating.

#### 9.2.5.2 Total exclusion

The energy use of lighting and ventilation in car parks used by the hotel may be totally excluded from the rating where—

- a) the car park is not located on the site of the hotel; or
- b) both—
  - 1) the ownership and management of the car park are independent of the ownership and management of the hotel to be rated; and
  - 2) there is a separate meter (or group of meters) that covers the entire energy use associated with the car park but does not cover any other aspect of the building's central services energy use that must be included in the assessment.

**Note:** The hotel employing a manager for the car park is not considered "independent of the ownership and management of the hotel to be rated".

#### 9.2.5.3 Proportional exclusion of energy use

Where the hotel does not have use of all of the building's car park, then a proportion of the energy use associated with the non-hotel car spaces may be excluded from the rating in accordance with the following:

a) Proportional exclusion of car park energy use is only permitted where there is a separate meter (or group of meters) that covers the entire energy use associated with the car park but does not cover any other aspect of the hotel's energy use that must be included in the assessment.

**Example:** It is not uncommon for car park metering to include other basement services such as hydraulic pumping. In such cases, proportioning is not permitted.

- b) Where commercial agreements with one or more third parties assigns a proportion of the measured car park energy use, then the share(s) specified in the documentation must be used in the assessment.
- c) If no specific allocation of the energy use is given in third-party commercial agreements, then the relevant proportion is calculated by dividing the number of parking spaces allocated to the hotel by the total number of parking spaces.

Where pass cards or keys have been issued to the hotel, the number of parking spaces allocated to the hotel is the greater of the—

- 1) number of physically dedicated parking spaces; and
- 2) number of pass cards or keys issued (to a limit of the total number of parking spaces)

Dedicated parking space, pass or key allocation data must be sourced from third-party commercial agreements.

Chapter 9 | Minimum energy and water coverage

- d) If there are no third-party commercial agreements available, then it is acceptable to determine the proportions by obtaining documentation signed by third parties that identifies the proportion of allocation.
- e) If there is no documentation and no third parties are able or willing to identify proportions, then all of the energy use associated with the car park must be included in the assessment.
- Regardless of the method used to proportion the energy use, the maximum that can be excluded is 100 % of the measured car park energy usage.

The Assessor must fully document both the method and all data used to proportion car park energy usage.

For documentation requirements, see Section 10.7.2.

#### 9.2.5.4 Standard for acceptable data

Compliance with this section (9.2.5) on car parks is deemed to satisfy the accuracy requirements of Section 3.4.

#### 9.2.6 Exclusions

#### 9.2.6.1 General

Energy use may only be excluded from a rating if—

- a) the energy is not part of the minimum energy coverage of the rating;
- b) there is a methodology within the Rules that permits exclusion; and
- c) the coverage, accuracy and validation requirements for the metering of the exclusion are not met.

The metering for any exclusion must not include any end uses that are required under the minimum energy coverage.

#### 9.2.6.2 Electric vehicle charging points

The energy associated with electric vehicle charging points does not form part of the minimum energy coverage and is not required to be included. Emissions associated with moving vehicles are not included in the scope of ratings.

#### 9.3 Minimum water coverage

#### 9.3.1 General

Once the water sources and their supply points have been determined, Assessors must ensure that all the required water end uses (as listed in this chapter) are covered by the sources and supply points identified in accordance with Chapter 3 of NABERS The Rules — Metering and Consumption.

#### The Rules | Energy and Water for Hotels | Version 4.0 Chapter 9 | Minimum energy and water coverage

If an **end use** is required to be included in the rating but is not covered by one of the supply points identified, then the **Assessor** must use one of the alternative allowable methods listed in Chapter 7 of *NABERS The Rules — Metering and Consumption* to ensure the minimum water coverage requirements can be met.

#### 9.3.2 Water coverage

Required minimum water coverage includes all water uses within the premises to support the operation of the hotel during the **rating period**, including the following:

- a) Water for taps, sinks, showers and baths in common area, guest room and back-ofhouse.
- b) Water in air-conditioning and other base building services, e.g. general cleaning, façade cleaning.
- c) All water for services supplied for guests, such as swimming pools and gymnasiums, etc.
- d) Water in fire services if metered.
- e) Water in on-site laundries.
- f) Water in hotel restaurants and cafes located within the rated premises that have charge-to-room facilities for guests.
- g) Water in spas and other facilities located within the **rated premises** that have charge-to-room facilities for guests.
- h) Water in water features and irrigation associated with the hotel, including those areas outside the building, but within site boundaries.
- i) Water for toilets.

Water consumption for non-hotel applications that do not have charge-to-room facilities (e.g. podium retail stores) may be excluded. These may only be excluded on the basis of meter readings specific to the application concerned. In the absence of meter readings, no exclusions are permitted. No estimates are permitted.

#### 9.3.3 Fire system consumption

Water consumption from the operation of a building's fire system, whether consumed in an emergency or during testing, is considered a cost of operating a building and must be included in the calculation of water consumption if it is metered. If it is not metered, fire system consumption need not be included.

**Note:** Metered fire system consumption that is re-used within the building will tend to improve the rating.

#### 9.4 Exclusions

Energy or water use may only be excluded from a rating if permitted by a provision of these **Rules** and either—

Chapter 9 | Minimum energy and water coverage

- a) quantified by a method of measurement or estimation specified in that provision, or
- b) separately metered (or otherwise measured in the case of batch deliveries) from all energy uses to be included in the rating.

Any exclusion must only cover the specific item being excluded. This means that every item to be excluded must be assessed separately, and the justification for its exclusion is to be included in the documentation.

Water use may only be excluded from a rating if—

- 1) the water is not part of the minimum required water coverage of the rating;
- 2) there is a methodology within the Rules that permits the exclusion; and
- 3) the coverage, accuracy and validation requirements for the metering of the exclusion are met.

The metering for any exclusion must not include any end uses that are required under the minimum water coverage.

For documentation requirements, see Section 10.7.4.

#### 9.5 Unoccupied spaces

The water use of unoccupied spaces must always be included, even though the space may have been excluded from or discounted in the number of guest rooms, laundry serviced rooms, function rooms seats or area of heated pool calculations.

# 10 Documentation requirements for accredited ratings

#### 10.1 General

The **Assessor** must keep all records on which an assessment is based, including any specific guidance or approvals given by the **National Administrator**. Data retained for audit must be in a form which facilitates reviews and makes anomalies easily apparent.

Access to original documents is preferred if they are available. Copies of original documents may be used as evidence as long as the **Assessor** is satisfied that they are, or can be verified to be, true and complete records of the original documents or files.

Information may be contained in many different formats. The purpose of the documentation is to provide an acceptable, credible source of the required information. In some instances, specific document types may be unnecessary for an individual rating. However, under different rating circumstances, the specific document types may carry multiple items of information required for the rating. The qualifying factor is not the type of document but that the documentation contains the required information in an acceptable format.

The information in Sections 10.2 to 10.7 is required for a rating. It is organised based on the divisions of previous chapters, see Chapter 4 to Chapter 9. All the required information should be obtained from the owner/manager of the premises before a site visit, and then confirmed during the site visit and subsequent assessment. An on-site inspection helps to verify that the information provided is accurate, current and complete.

Individual ratings may require additional information or documentation depending on the individual circumstances of the **rated premises**. Table 10.1 provides an overview of the documentation required for energy and water ratings according to data type.

#### Table 10.1: Overview of documentation required for energy and water

Data type	Information required	NABERS energy	NABERS water
Climate	Building's postcode.	✓	✓
Number of guest rooms	<ul> <li>Number of—</li> <li>a) guest rooms; and</li> <li>b) for on-site laundry purposes, external guest rooms.</li> </ul>	<b>√</b>	<b>✓</b>
Hotel star rating	ATIC certified hotel star rating or rating determined using the self-assessment method.	<b>✓</b>	<b>✓</b>
Number of laundry-serviced rooms	Number of guest rooms where laundry is serviced on site.	<b>✓</b>	<b>✓</b>
Number of function room seats	Maximum capacity of function rooms that can be booked by external parties.	<b>✓</b>	<b>✓</b>
Area of heated pool	Area of <b>heated pools</b> located in common areas that are not accessible via rooms.	<b>✓</b>	N/A
Energy use	12 months of continuous data for all energy supplied to the hotel.	✓	N/A
Water use	12 months of continuous data for all external water supplied to the hotel.	N/A	✓

Page 35 nabers.gov.au

#### 10.2 Chapter 4: Number of guest rooms

Topic		Requirements	Documentation
10.2.1	Determining number of guest rooms	Section 4.3	<ul> <li>Required information</li> <li>Assessors must retain evidence of the total room count, in the form of—</li> <li>a) a schedule of rooms or floor plans identifying all of the guest rooms that are offered for individual sale; or</li> <li>b) if hotel documentation is not available, room counts verifying the number of guest rooms as part of the on-site inspection for each level of the hotel.</li> </ul>
10.2.2	Principle and definitions	Section 4.3.1	Required information  Assessors must retain evidence of a physical count from on-site inspection of 20 % of the floors. The largest floors must be counted first.  Documentation examples  Documentation that can be used as evidence includes—  a) site photos; b) video recordings; and c) Assessor site notes and other relevant documents.  Required information  Assessors must retain evidence confirming that none of the guest rooms are operated as dormitories.  Documentation examples  Documentation that can be used as evidence includes—

Chapter 10 | Documentation requirements for accredited ratings

		<ol> <li>a signed statement from hotel management;</li> <li>site photos;</li> <li>video recordings; and</li> </ol>
		4) Assessor site notes and other relevant documents.
10.2.3 Identifying out-of-	Section 4.3.2	Required information
service guest rooms		<b>Assessors</b> must retain evidence of hotel records documenting the <b>guest room</b> availability, using either—
		a) the date and end date of availability for each guest room; or
		b) records demonstrating the periods when rooms were unavailable for sale.
		Documentation examples
		Documentation that can be used as evidence includes—
		a) a signed statement from the hotel management; and
		b) copies of written records confirming operation.

#### 10.3 Chapter 5: Laundry serviced rooms

Topic		Requirements	Documentation
10.3.1	Determining number of laundry serviced rooms	Section 5.3	Required information  Assessors must retain evidence of an on-site laundry to provide the claimed laundry services.  Documentation examples  Documentation that can be used as evidence includes—

The Rules | Energy and Water for Hotels | Version 4.0 Chapter 10 | Documentation requirements for accredited ratings

			a) marked-up hotel drawings;
			b) site photos;
			c) video recordings; and
			d) Assessor site notes and other relevant documents.
10.3.2	Identifying	Section 5.3.2	Required information
	internal guest		Assessors must retain evidence from the hotel demonstrating—
	rooms serviced by on-site laundry		a) the number of internal guest rooms provided with on-site laundry;
	by on one launary		b) the start date and end date of availability for each internal guest room; and
			c) laundry service levels provided for the <b>guest rooms</b> .
			Documentation examples
			Documentation that can be used as evidence includes—
			a) a signed statement from the hotel management on room availability; and
			b) copies of written records confirming operation.
10.3.3	Identifying	Section 5.3.3	Required information
	external guest		Assessors must retain evidence from third-party hotels demonstrating—
	rooms serviced by on-site laundry		a) the number of external guest rooms served by the on-site laundry; and
	by on one launary		b) laundry service levels provided for the external guest rooms.
			Documentation examples
			Documentation that can be used as evidence includes—
			<ul> <li>a) schedule of rooms or floor plans identifying all of the external guest rooms that are serviced by the on-site laundry; or</li> </ul>

Chapter 10 | Documentation requirements for accredited ratings

		b) a signed statement from the external hotel management stating the number of rooms serviced.
10.3.4 Identifying laundry service level for laundry serviced rooms	Section 5.3.4	Required information  Assessors must retain evidence of hotel records documenting the availability of the on-site laundry, either—  a) the date and end date of availability for the laundry; or  b) records demonstrating the periods when the on-site laundry was unavailable.  Documentation examples  Documentation that can be used as evidence includes—  a) a signed statement from the hotel management; and  b) copies of written records confirming start and end dates of the operation of the laundry.

#### 10.4 Chapter 6: Hotel quality rating

Topic		Requirements	Documentation
10.4.1	Validity an accredited hotel quality report	Section 6.3	Required information  Assessors must retain evidence that demonstrates the accredited hotel quality star rating.  Documentation examples  Documentation that can be used as evidence includes—  a) copy of the ATIC assessment report; and  b) screenshot from Star Ratings Australia website showing hotel listing.

10.4.2	Validating self- assessed hotel quality	Section 6.4	Required information  Assessors must retain evidence for each item on the self-assessed hotel quality checklist.  Documentation examples  Documentation that can be used as evidence includes—  a) marked-up hotel drawings;  b) site photos;  c) video recordings;  d) hotel brochures;  e) publicly available information from hotel websites;  f) duty roster from reception/front office  g) Assessor site notes and other relevant documents.
10.4.3	Calculating average guest room size	Section 6.4.2	Required information  Assessors must retain evidence that demonstrates the average guest room size.  Documentation examples  Documentation that can be used as evidence includes—  a) schedule of rooms or floor plans identifying the number of rooms in each room type;  b) schedule of room areas for each type;  c) marked-up hotel drawings showing area measurements; and  d) Assessor site notes and other relevant documents.

Page 40 nabers.gov.au

#### 10.5 Chapter 7: Area of heated pool

Topic		Requirements	Documentation
10.5.1	Determining area of heated pools	Section 7.3	Required information  Assessors must retain evidence that identifies the presence of all heated pools within the facility by name or location.  Documentation examples  Documentation that can be used as evidence includes—  a) marked-up hotel drawings;  b) site photos;  c) video recordings; and
10.5.2	Measuring heated pool area	Section 7.3.2	d) Assessor site notes and other relevant documents.  Required information  Assessors must retain evidence that demonstrates the size of each swimming pool or spa  Documentation examples  Documentation that can be used as evidence includes—  a) site plans with measurements to scale; and  b) on-site measurements.
10.5.3	Determining heated pool availability periods	Section 7.3.3	Required information  Assessors must retain evidence that demonstrates the periods where pools were available for use by guests.  Documentation examples

	Documentation that can be used as evidence includes—
	a) a signed statement from the hotel management; and
	b) copies of written records confirming start and end dates of availability.

#### 10.6 Chapter 8: Function room seats

Topic		Requirements	Documentation
10.6.1	Determining number of function room seats	Section 8.3	Required information  Assessors must retain evidence that demonstrates the presence of function rooms.  Documentation examples  Documentation that can be used as evidence includes—  a) schedule of rooms or floor plans identifying all of the function rooms that are available for public booking;  b) hotel website; and c) marketing material.
10.6.2	Determining maximum occupancy	Section 8.3.2	Required information  Assessors must retain evidence that demonstrates the maximum occupancy of each maximum occupancy of each function room for which function room seats are being claimed.  Documentation examples  Documentation that can be used as evidence includes—  a) records of current licence certificates or authority approvals for the maximum number of seated guests; or

Chapter 10 | Documentation requirements for accredited ratings

			b) current and publicly available records that specify the maximum seating capacity of the space.
10.6.3	Determining usage	Section 8.3.3	Required information  Assessors must retain evidence that demonstrates the bookings for all function rooms for the whole of the rating period.  Documentation example
			Documentation that can be used as evidence includes copies of written records confirming all bookings and room configurations used.

#### 10.7 Chapter 9: Minimum energy and water coverage

Topic		Requirements	Documentation
10.7.1	Minimum energy	Section 9.2	Required information
	coverage		Assessors must retain evidence of any agreements between the hotel owner and third parties, to apportion energy costs for common or shared facilities.
			The documentation requirements contained within Section 9.2 of NABERS The Rules — Metering and Consumption apply.
			Documentation example
			Where an existing single-line diagram is unavailable, a progressive confirmation of coverage over several ratings is permitted. This confirmation must be completed as part of an on-site visit and documented on the existing single-line diagram in detail.
10.7.2	Car parks	Section 9.2.5	Required information
			Assessors must retain evidence of any agreements between the hotel owner and third parties, concerning—

		a) car park usage; and
		b) apportionment of utility costs for common or shared facilities.
		Documentation example
		Documentation that can be used as evidence includes copies that must show the method and data used to proportion car park energy usage.
10.7.3 Minimum water	Section 9.3	Required information
coverage		Assessors must retain evidence of any agreements between the hotel owner and third parties, to apportion water costs for common or shared facilities.
		The documentation requirements contained within Section 9.2 of NABERS The Rules — Metering and Consumption apply.
		Documentation examples
		Documentation that can be used as evidence includes—
		a) reticulation diagrams showing all relevant equipment and metering systems;
		b) documentation of the source, quantities and any non-recycled component of externally supplied recycled water; and
		c) calculations or documentation confirming any consumption to be excluded from the rating and substantiating the grounds for the exclusion.
10.7.4 Exclusions	Section 9.4	Required information
		<b>Assessors</b> must retain evidence that supports any exclusions used as part of the rating application.
		Documentation examples
		Documentation that can be used as evidence includes—
		a) information confirming any consumption to be excluded from the rating;

Chapter 10 | Documentation requirements for accredited ratings

	b) calculations; and
	c) documentation substantiating the grounds for the exclusion.

### Appendix A Rating period

#### A.1 Allowance for lodgement

#### A.1.1 General

A NABERS rating is based on 12 months of **acceptable data**, called the **rating period**. Once certified, the rating is valid for up to 12 months, called the **validity period**.

It can take time for an **Assessor** to complete a rating. Therefore, a period of 120 calendar days is given to lodge the rating after the end of the **rating period**. Ratings lodged after the 120 calendar days will have a reduced **validity period** to ensure all ratings are based on current data.

Sections A.1.2 and A.1.3 provide examples of this principle.

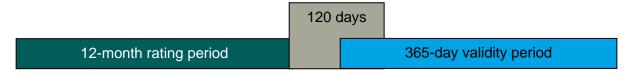

#### A.1.2 Scenario 1

A NABERS rating is lodged with the **National Administrator** within 120 calendar days of the end of the **rating period**. It will be valid for 365 days from the date of certification, see Figure A.1.2.

**Example:** The process for date of certification will be as follows:

- a) The **rating period** is 1 January 2022 to 31 December 2022. The due date is therefore 30 April 2023.
- b) The **Assessor** lodges the rating on 1 February 2022, and the **National Administrator** certifies it on 5 February 2022. This is before the due date.
- c) The rating will therefore be valid for 365 days from the date of certification (5 February 2022).

Figure A.1.2: Rating lodged within 120 days of end of rating period

#### A.1.3 Scenario 2

A NABERS rating is lodged with the **National Administrator** more than 120 calendar days after the end of the **rating period**. It will be valid for 365 days from the end of the **rating period**, see Figure A.1.3.

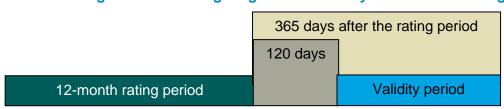

**Example:** The process for date of certification will be as follows:

a) The **rating period** is 1 January 2022 to 31 December 2022. The due date is therefore 30 April 2023.

- b) The **Assessor** lodges the rating on 1 June 2023, and the **National Administrator** certifies it on 6 June 2023. This is after the due date.
- c) The rating will therefore be valid for 365 days from the end of the **rating period** (31 December 2022).
- d) It will expire on 31 December 2023.

Figure A.1.3: Rating lodged after 120 days from end of rating period

#### A.2 Allowance for responses

#### A.2.1 General

The Assessor are given 120 days after the rating period to lodge ratings with the National Administrator. The Assessor should allow 10 working days within this 120-day period for a response from the National Administrator. The National Administrator then allows a further 10 working days for the Assessor to respond to any queries that arise from quality assurance checks before certification.

When the **Assessor** is required to provide clarification multiple times, this must be done within the allowable 10 working days period.

If the **Assessor** has not responded adequately to all queries and the rating has not been certified within 120 days of the end of the **rating period** plus 10 working days, the rating will only be valid for up to 365 days from the end of the **rating period**. This does not include the time taken by the **National Administrator**.

Section A.2.2 provides an example of this principle.

#### A.2.2 Scenario 3

A NABERS rating is lodged with the **National Administrator** 1 day before the lodgement due date (120 days from the end of the **rating period**). Depending on how quickly the **Assessor** responds to clarifications, the rating will either be valid for 365 days from the date of certification or 365 days from the end of the **rating period**.

**Example:** The process for date of certification will be as follows:

- a) The **rating period** is 1 January 2022 to 31 December 2022. The due date is therefore 30 April 2023.
- b) The Assessor lodges the rating on 29 April 2023, 119 days after the end of the rating period.

Appendix A | Rating period

- c) The National Administrator responds on 3 May 2023 requesting further clarification. The Assessor must provide adequate clarification by 14 May 2023 (120 days from the end of the rating period plus 10 working days) for the rating to be valid for 365 days from the date of certification.
- d) If the **Assessor** responds on the 8 May 2023, the rating will be certified and valid until the 8 May 2024.
- e) If the **Assessor** does not respond with clarification until the 30 May 2023, the rating will only be valid until 365 days from the end of the **rating period** and therefore will expire on the 31 December 2023.

#### A.3 Adjusting the rating period

After the rating has been lodged, the **Assessor** may require the **rating period** to be changed. The **rating period** may only be adjusted by a maximum of 62 days from the first lodgement. A new rating will need to be created if the **Assessor** would like to adjust the **rating period** by more than this initial timeframe.

**Note:** A rating is required to comply with the **Rules** that are current at the time of lodgement. **Assessors** are advised to seek advice and request a **Ruling** (if needed) prior to lodging ratings that may require one.

#### A.4 Lodging successive ratings

#### A.4.1 General

For a building which already has a current rating, there are two options to complete another rating of the same type, i.e. replace or renew.

**Note:** The **Assessor** will be prompted to select "replace" or "renew" when creating a rating. This selection can be changed just before the rating is lodged but not after.

#### A.4.2 Option 1: Replace

The replace option allows the new certified rating to replace the existing rating immediately upon certification.

There will be loss of the existing rating's remaining **validity period**. This option may be chosen if the new rating is better than the existing rating, see Figure A.4.2.

Figure A.4.2: Existing rating replaced by new rating

#### A.4.3 Option 2: Renew

The renew option allows the new certified rating to begin its **validity period** immediately after the existing rating **validity period** expires. This option is often chosen when a site is most concerned with maximising the **validity period**.

As ratings are based on current data, the new **validity period** cannot not exceed 485 days from the end of the **rating period**. To ensure the new rating maximum **validity period** is achieved, the **validity period** must start within 120 days after the end of the **rating period**.

Section A.4.4 provides an example of this principle.

#### A.4.4 Scenario 1

A NABERS rating is lodged with the **National Administrator** and the renew option has been selected. The new rating begins its **validity period** within 120 days after the end of the **rating period**, see Figure A.4.4.

**Example:** The process for date of certification will be as follows:

- a) The current rating's validity period expired 31 December 2022.
- b) The rating period is 1 October 2021 to 30 September 2022 for the renewal rating.
- c) The Assessor lodges the renewal 1 November 2022 and the National Administrator certifies it on 7 November 2022.
- d) The validity period for the renewal will be 1 January 2023 to 31 December 2023.

Figure A.4.4: Validity period for new rating begins once old rating expires and new validity period is 365 days

If the new rating's **validity period** begins more than 120 days after the end of the **rating period**, the validity will be reduced as the **validity period** will exceed 485 days from the end of the **rating period**.

**Note:** An expired rating can be renewed. The **validity period** will begin on the date of certification, rather than the date the previous rating expired.

Section A.4.5 provides an example of this principle.

#### A.4.5 Scenario 2

A NABERS rating is lodged with the **National Administrator** and the renew option has been selected. The new rating begins its **validity period** over 120 calendar days after the end of the **rating period**, see Figure A.4.5.

**Example:** The process for date of certification will be as follows:

- a) The current rating's validity period expired 31 December 2022.
- b) The rating period is 1 August 2021 to 31 July 2022 for the renewal rating.

Appendix A | Rating period

- c) The **Assessor** lodges the renewal 1 November 2022 and the **National Administrator** certifies it on 7 November 2022.
- d) The **validity period** for the renewal will be 1 January 2023 to 28 November 2023, 485 days after the end of the **rating period**.

Figure A.4.5: Validity period for new rating begins once old rating expires and new validity period is less than 365 days

12-month rating period		485 days after the ratin	ng period
	Old	365-day validity period	New validity period

# Appendix B Self-assessed hotel quality checklist

#### B.1 KPI checklist

The **hotel quality** checklist assigns weightings to each of the **KPI** category answers. Different answers are categorised into different quality bands, e.g. 4 to 5 stars **KPIs**, 3 to 5 stars **KPIs**. Where some answers do not contribute to the **hotel quality** checklist, these have been labelled "No contribution", see Table B.1.

If the service is not provided by the hotel, the **Assessor** should choose "No" on the **NABERS** rating input form.

Table B.1: KPI checklist

Question	Answer	KPI category	KPI weighting
How many hours per day	24 h	4 to 5 stars	1
is the reception staffed?	16 h to 24 h night bell/direct phone	4 to 5 stars	0.5
	12 h to 16 h	3 to 5 stars	1
	8 h to 12 h	3 to 5 stars	0.5
	<8 h	No contribution	0
How many meals per day	7 <sup>2</sup> days, 3 meals	4 to 5 stars	1
does the hotel serve? (Dine in options) <sup>1</sup>	7 days, 2 meals	3 to 5 stars	1
(= 3	7 days, 1 meal; or Less than 7 days; or No meals served	No contribution	0
Is room service offered by	Yes, 24 h to room	4 to 5 stars	1
the hotel?	Yes, 24 h phone and collect	4 to 5 stars	0.5
	No	No contribution	0
Does the hotel have a bar/lounge?	Yes	4 to 5 stars	1
Does the hotel have a swimming pool?	Yes	4 to 5 stars	1.5
	Yes, day spa	4 to 5 stars	1

Question	Answer	KPI category	KPI weighting
Does the hotel have a spa/sauna in a common area?	Yes, spa/sauna	4 to 5 stars	1
Does the hotel have a gym?	Yes	4 to 5 stars	1
Does the hotel offer guest laundry services?	Yes, laundry and dry-cleaning service	4 to 5 stars	1
	Yes, self-service laundry available to guests	No contribution	0
Does the hotel have a concierge?	Yes	4 to 5 stars	1
Does the hotel have a porter?	Yes	4 to 5 stars	1
Does the hotel have business/conference facilities?	Yes	3 to 5 stars	1
What is the relevant	> 30 m²	4 to 5 stars	2
category for average	≥23 m² to ≤30 m²	4 to 5 stars	1.5
guest room size? (Assessor only)	≥15 m² to <23 m²	3 to 5 stars	1
(2.133333)	<15 m <sup>2</sup>	No contribution	0

<sup>1</sup> If the number of meals available at a property varies throughout the week, the minimum number of available meals per day should be used.

#### B.2 Calculation of self-assessed quality

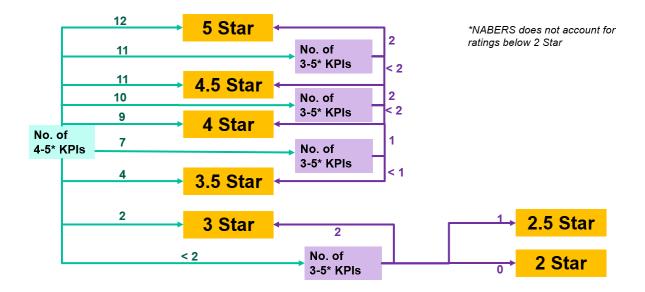

The self-assessed **hotel quality** star rating is determined by following the flow chart in Figure B.2, which is completed automatically by the **NABERS rating input form**. The flow chart first determines the weighted score for the 4 to 5 stars **KPI** categories (following the green lines). Then the weighted score for 3 to 5 stars **KPI** categories are determined to give a final resultant star rating.

Figure B.2: Method of determining self-assessed hotel quality star rating

<sup>2</sup> If the maximum number of days served is only ever 5, then this does not count as being "up to 7" and the answer would be "No". If it can be up to 7 days depending on the season, then this counts as 7 days.

Appendix B | Self-assessed hotel quality checklist

## Appendix C List of changes

The following table lists the changes to the content of *NABERS The Rules* — *Energy and water for hotels*, v3.2, 2015, in order to produce this version 4.0.

Overview	Overview			
Version 3.2 (superseded)	Version 4.0 (current)	Content changes		
Document loca	tion			
Chapter 1 Introduction	Chapter 1 Introduction	Chapter 1 has been restructured, revised and updated in accordance with NABERS Style Guide, as follows: General. Interpretation of the Rules and Rulings. Situations not covered by the Rules. How to use this document. What is new in this version. Related documents.		
Chapter 2 Key concepts	Chapter 2 Terms and definitions	Title changed.  Most of its content moved to other chapters or documents.  Chapter 2 in v4.0 now contains only the terms and definitions integral to the proper understanding and use of the document.		
Section 2.1	N/A	Deleted.		
Section 2.2	Chapter 2			

	1	
		k) out of service
		I) Rules
		m) standard guest room restaurant
		n) utility
		The following have been added:
		accredited hotel quality
		2) Australian Tourism Industry Council
		3) heating, ventilation and air-conditioning (HVAC)
		4) hotel quality
		5) NABERS rating input form
		6) rated premises
		7) Ruling
		8) validity period
		The following have been deleted:
		i) alternative method

Section 2.3	Sections 1.2	Integrated into Chapter 1.
0000011 2.0	and 1.3	integrated into Onapter 1.
Section 2.4	Section 3.7	Minor editorial changes.
Section 2.5	Section 10.1	Content incorporated into new Chapter 10.
	1	

Section 2.6	Section 3.3 and Appendix A	Most of content incorporated into new Appendix A.
Section 2.7	Section 3.4	Some content incorporated into NABERS The Rules — Metering and Consumption.
		Minor editorial changes.
Section 2.8	Section 3.5	Minor editorial changes.
Section 2.9	Section 3.6	Minor editorial changes.
N/A	Chapter 3 Key concepts and procedures	Chapter 3 is a new chapter which has been added. It has been restructured, revised and updated in accordance with NABERS Style Guide.
		This new chapter now contains some content from Chapter 2 in v3.2.
Chapter 3	Chapter 4	Chapter 3 in v3.2 has become Chapter 4 in v4.0.
Number of guest rooms	Number of guest rooms	All documentation requirements have been moved to Chapter 10.
		All figures have been reviewed and updated.
Section 3.1	Section 4.1	Minor rewording for clarity.
Section 3.2	Section 4.2	Reformatting, content remains the same.
Sections 3.3 and 3.4	Section 4.3	Majority of content consolidated into single section.  Out of service recording updated to days to match
Continuo 2 F	Continu 2.2	perform.
Section 3.5	Section 3.2	Content has been moved under eligibility criteria section.
Chapter 5 Laundry	Chapter 5 Laundry	Chapter 5 in v3.2 has been re-ordered to appear before hotel quality rating and has become Chapter 5 in v4.0.
serviced rooms	serviced rooms	All standard for acceptable data content has been moved to Section 3.2.
		All documentation requirements have been moved to Chapter 10.
		All figures have been reviewed and updated.
Section 5.1	Section 5.1	Minor rewording for clarity.
Section 5.2	Section 5.3.5	Content added to clarify requirement confirming laundry availability.
Sections 5.3,	Section 5.3	Sections combined to align with other chapters.
5.4 and 5.5		Content added to clarify internal room laundry or common guest laundry not included in laundry serviced rooms.
		Requirement to provide evidence for dates rooms were not serviced by laundry deleted.
		Laundry availability treated separately in Section 5.3.5.

	<u> </u>	
Chapter 4 Hotel star rating	Chapter 6 Hotel quality rating	Title changed.  Chapter 4 of v3.2 has been re-ordered to appear after laundry serviced rooms and has become Chapter 6 in v4.0.
		All standard for acceptable data content has been moved to Section 3.2.
		All documentation requirements have been moved to Chapter 10.
		All figures have been reviewed and updated.
Section 4.1	Section 6.1	Wording clarified to replace "star rating" with "hotel quality" and include references to Australian Tourism Industry Council (ATIC) and Star Ratings Australia.
Section 4.2	Section 6.2	Content added to clarify requirement for current license.
		Option to use hotel listing on Star Ratings Australia website to demonstrate certificate added.
		Section for determining self-assessed hotel quality based on KPIs added.
Section 4.3	Section 6.3	Content updated to include references to ATIC.
Section 4.4	Section 6.4	Section completely re-written based on validation of self- assessed hotel quality using KPIs.
		References to KPI checklist in Appendix B added.
		Content added to define process for calculating average guest room size.
Section 4.5	N/A	Requirement to calculate average cost of room deleted.
Chapter 7 Area of heated pools	Chapter 7 Area of heated pool	Chapter 7 in v3.2 has been re-ordered to appear before function room seats and has become Chapter 7 in v4.0.  All standard for acceptable data content have been moved to Section 3.2.
		All documentation requirements have been moved to Chapter 10.
		All figures have been reviewed and updated.
Section 7.2	Section 7.2	Reformatting, content remains the same.
Sections 7.3,	Section 7.3	Sections combined to align with other chapters.
7.4 and 7.5		Heated pool closure periods reworded from weeks to days periods.
		Pool availability time period updated to days instead of weeks.
Chapter 6 Function	Chapter 8 Function room	Chapter 6 in v3.2 has been re-ordered to appear after area of heated pool and has become Chapter 8 in v4.0.
room seats	seats	All standard for acceptable data content has been moved to Section 3.2.

		All documentation requirements have been moved to Chapter 10.
		All figures have been reviewed and updated.
Section 6.2	Section 8.2	Reformatting, content remains the same.
Sections 6.3, 6.4 and 6.5	Section 8.3	Sections combined to align with other chapters.  Minor rewording to add clarification that the primary purpose of function rooms is availability.  Content added with clarification that full HVAC capacity is
		required for function rooms.  Note added to clarify Assessors not expected to physically count seats but find publicly available records. Sections 8.3.2 and 8.3.3 defining function room bookings added.  Section 8.3.3 partition wording updated to include solid walls for clarity.
		Example re-written for clarity.
Chapter 8 Energy coverage	Chapter 9 Minimum energy and water usage	Chapters 8 (energy coverage) and 9 (water coverage) in v3.2 are now combined to form this new chapter. This chapter has been restructured, revised and updated in accordance with NABERS Style Guide.  Some content has been separated and incorporated into
		NABERS The Rules — Metering and Consumption.
		Where possible, content has been simplified for clarity.
Section 8.1	Sections 9.1 and 9.2	Sections 8.1 and 9.1 in v3.2 have been combined to form Section 9.1 in v4.0.
		Section 9.1 added reference to Chapter 3 of NABERS The Rules — Metering and Consumption.
Section 8.1.6	Section 9.2.6	Energy exclusions re-written. Section 9.2.6.2 on electric vehicle charging points added.
Section 8.2	N/A	On-site generation section deleted.  Reference to NABERS Ruling — On-site Renewable Electricity Generation Systems for more information on on-site renewable systems added.
Section 8.3	N/A	GreenPower™ section deleted as content covered in NABERS The Rules — Metering and Consumption.
Section 8.4	Section 10.7	All documentation requirements have been moved to Chapter 10.
Section 9.1	Sections 9.1 and 9.3	Introductory content about water combined with energy in Section 9.1 in v4.0.

		Some paragraphs reorganised to improve flow of sections, such as on-site capture and recycling, moved to Section 9.3.
Section 9.2	Section 10.7	All documentation requirements have been moved to Chapter 10.
Chapter 10 Metering systems	N/A	Chapter 10 v3.2 has been moved to NABERS The Rules — Metering and Consumption as it relates to metering systems in a variety of building types, not just in hotels.
		The distribution of content across various chapters in NABERS The Rules — Metering and Consumption is due to the division between utility metering systems and non-utility metering systems.
		A substantial amount of content (Section 10.4 onwards) regarding the validation of non-utility metering systems has been reworked into a new chapter (refer to Chapter 6) of the NABERS The Rules — Metering and Consumption.
Chapter 11 Consumption data	N/A	Chapter 11 in v3.2 has been moved to NABERS The Rules — Metering and Consumption as it relates to metering systems in a variety of building types, not just in hotels.
		The distribution of content across various chapters in NABERS The Rules — Metering and Consumption is due to the division between utility metering systems and non-utility metering systems.

**Note:** Appendices have been separated and restructured in v4.0 and now appear as standalone chapters with separate numbering.

Appendix A in v3.2 has been moved to Chapter 10.

Appendix B in v3.2 has been moved to *NABERS The Rules* — *Metering and Consumption*. Appendix A in v4.0 now has new content on the rating period.

Appendix B in v4.0 now has new content on self-assessed hotel quality.

Appendix A Information checklist for accredited ratings	Chapter 10 Documentation requirements for accredited energy	Appendix A in v3.2 has been restructured, revised, updated and moved to Chapter 10 in v4.0.  All documentation requirements have been consolidated into the new Chapter 10. This new chapter provides a breakdown of the requirements needed for accreditation and (where applicable) examples.  The content has been reviewed and simplified for clarity, with some content moved to NABERS The Rules — Metering and Consumption.
Section 12.1 Appendix A	Section 10.1	Section 12.1 of Appendix A in v3.2 deleted.  Requirement information checklist for accredited ratings added.

N/A	Section 10.3.4	Content for evidence required for demonstrating availability of laundry added.
N/A	Section 10.4.1	Content for accredited hotel quality added.
N/A	Section 10.4.2	Content for self-assessed hotel quality added.
N/A	Section 10.5.3	Content evidence required for demonstrating availability of heated pool added.
N/A	Section 10.6.2	Content for evidence required for demonstrating function room seats.
N/A	Section 10.7.1	Content that allows for progressive confirmation of coverage where a single line diagram doesn't exist.
N/A	Appendix A Rating period	Appendix A is a new appendix which has been added. It outlines the rating period in detail.
		The updates are to support NABERS Perform.
Appendix B Guide to non-utility metering system validation	N/A	Appendix content moved to NABERS The Rules — Metering and Consumption.
N/A	Appendix B Self-assessed hotel quality checklist	Appendix B is a new appendix which has been added. It provides KPI checklist for validating self-assessed hotel quality.  Flow chart demonstrating calculation of self-assessed quality included (for Assessor only reference), as quality
		calculated automatically by NABERS Perform.
N/A	Appendix C List of changes	Chapter C is a new appendix which has been added. It lists content changes between v3.2 and v4.0 of NABERS The Rules — Energy and Water for Hotels.
