

# NABERS BASELINE METHOD

NSW Energy Savings Scheme

Find out how your NABERS Energy rating  
can earn you thousands of dollars

---

# WHAT IS THE NSW ENERGY SAVINGS SCHEME?

The NSW Energy Savings Scheme (ESS) promotes energy efficiency by providing financial incentives for organisations to reduce their energy consumption.

When a business can prove that it has reduced its energy use without also reducing its production or service levels, it can earn Energy Savings Certificates (ESCs).

ESCs are the 'currency' of the ESS and are calculated based on the amount of energy saved when the business undertakes energy saving activities - one certificate is created for approximately 1MWh of electricity or 0.39 MWh of gas saved. ESCs are purchased by electricity

retailers and other organisations to meet regulatory obligations and energy saving targets.

Accredited Certificate Providers (ACPs) create, register and sell ESCs for their own company or on behalf of a client.

ESCs are generated through a number of approved energy saving methods designed for particular sectors and activities. The NABERS Baseline is an approved method that uses a NABERS Energy rating to calculate ESCs from verified annual energy savings.

---

## CREATING ENERGY SAVINGS CERTIFICATES (ESCS)

There are two ways to create ESCs using the NABERS Baseline Method:

### FORWARD CREATION (DEEMING)

Forward creation, or deeming, is when the expected energy savings of a building are collected in advance. Buildings can forward create ESCs for up to three years and receive the payment all at once. If, during those three years, the building saves more energy than expected, the building can 'top-up' certificates in years two and three. Annual creation is then available until the baseline expires in year seven.

### ANNUAL CREATION

Annual creation involves calculating a building's energy savings each year. If a building uses this approach, it can generate ESCs by comparing its current NABERS Energy rating with a previous NABERS Energy rating for the same building. The previous NABERS Energy rating can be taken from up to seven years prior to the current rating, however an annual rating adjustment is included in the calculation.

# NABERS BASELINE METHOD

In March 2020, improvements to the NABERS baseline method made it easier for building owners and asset managers to create ESCs.

The NABERS Baseline method calculates ESCs using inputs from a NABERS Energy rating that is at least 0.5 stars higher than the benchmark NABERS rating.

## HOW IS THE BENCHMARK RATING CALCULATED?

There are two methods to calculate the Benchmark NABERS Rating:

### METHOD 1

#### BENCHMARK NABERS RATING INDEX ELIGIBILITY

##### CALCULATION

- Based on performance above the market average energy rating for a building of the same type.

*As listed in Table A20 of the [ESS Rule](#)*

##### ELIGIBILITY

- Must be a NSW building to use NABERS Baseline Method
- Must be the building's first NABERS rating
- Must have a star performance at least 0.5 stars over the set benchmark rating

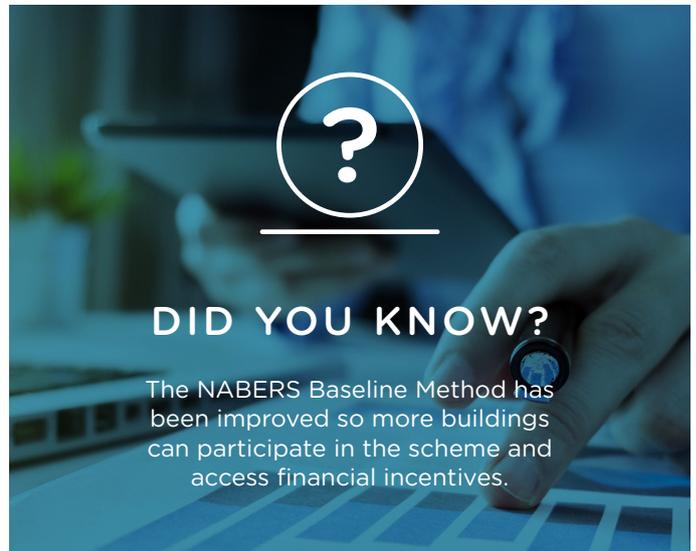

*As listed in Table A20 of the [ESS Rule](#)*

##### AVAILABILITY

- Available for all building types that are eligible for a NABERS Energy rating
- Not available if the rating was done to meet a legal requirement e.g. Commercial Building Disclosure
- Available only for the energy efficiency component of the rating. Excludes Green Power

##### CREATING ESCS

- Forward creation not available
- Annual creation not available

## DID YOU KNOW?

The NABERS Baseline Method has been improved so more buildings can participate in the scheme and access financial incentives.

### METHOD 2

#### HISTORICAL BASELINE NABERS RATING ELIGIBILITY

- Based on performance above a previous rating for the same building

*Can be taken from up to seven years prior to the current rating year*

- Must be a NSW building to use NABERS Baseline Method
- Must have a previous NABERS rating
- Must have at least an 0.5 star increase from a previous rating

*Previous rating can be from one to seven years ago*

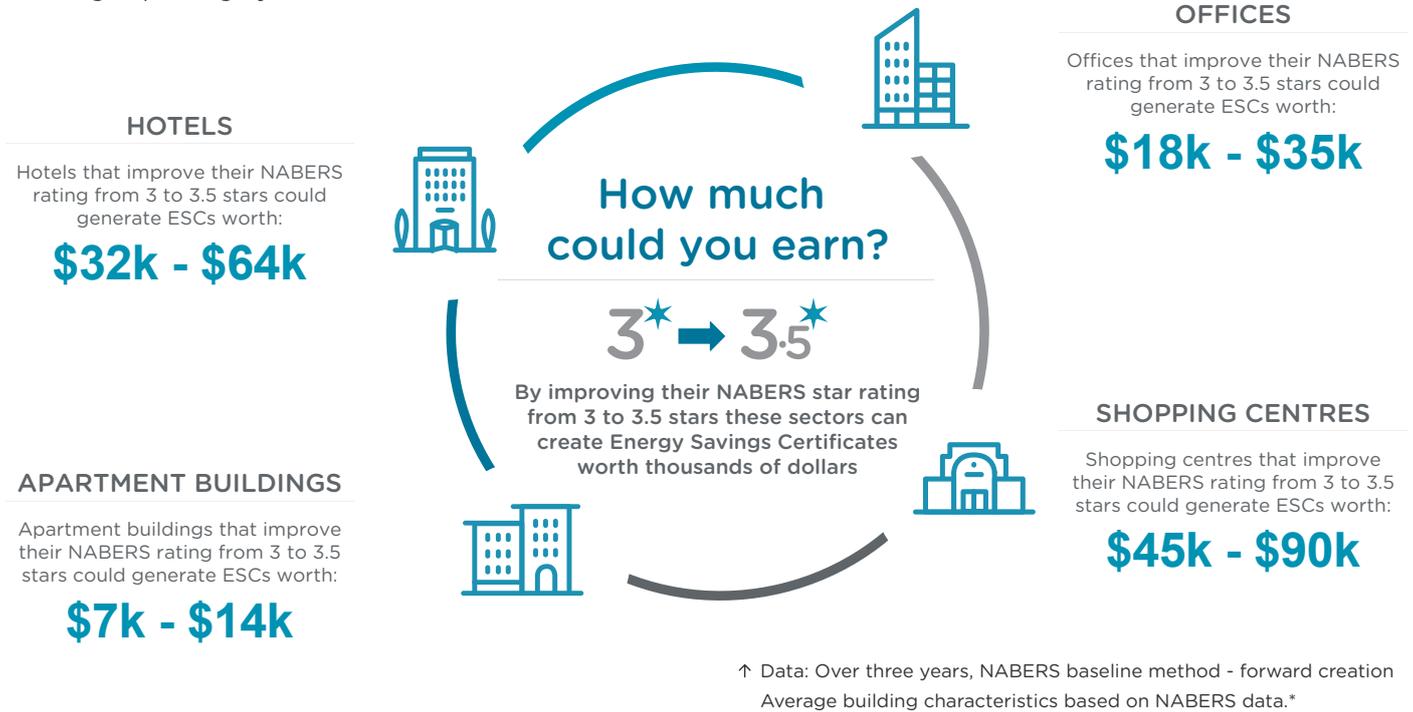

- Available for all building types that are eligible for a NABERS Energy rating
- Available only for the energy efficiency component of the rating. Excludes Green Power

- Forward creation available for up to three years
- Annual creation available for up to seven years before the current rating

# HOW MANY ESCS COULD A NABERS RATING GENERATE?

ESCs are calculated and created based on the amount of energy saved.

In the examples modelled below, the potential ESC earnings are based on an average NABERS rated building improving by 0.5 stars.

## GET A NABERS ENERGY BASELINE RATING

### 1. GATHER YOUR DATA

Gather 12 months of historical data for your building and submit your NABERS rating. NABERS will validate your data and your NABERS rating will become your baseline for energy efficiency improvements.

### 2. MAKE YOUR PLAN

Make a plan to reduce your energy consumption during the next 12 months.

### 4. CONTACT AN ACP

Contact an Accredited Certificate Provider (ACP). Choose a NABERS ACP from the registered list and find out if you are eligible to participate.

### 3. IMPROVE YOUR RATING

Work with an ACP and a NABERS Assessor to reduce your energy consumption. Collect data, track performance and generate ESCs.
